
Enterprise Manufacturing Business Intelligence System (EMBIS)

Dashboard User Guide

Version: 1.0

Author: Jack Kisutsa

Introduction

Welcome to the Enterprise Manufacturing Business Intelligence System (EMBIS).

This guide explains how to navigate, interact with, and interpret the dashboards within the workbook.

The dashboards are designed to provide decision-makers with interactive insights into manufacturing operations, sales performance, inventory management, finance, customer analytics, and supplier performance.

Dashboard Navigation

Use the navigation buttons available on every dashboard.

Button	Function
 Home	Returns to Dashboard Index
 Previous	Opens previous dashboard
 Next	Opens next dashboard

Available Dashboards

Dashboard	Purpose
Dashboard Index	Navigation hub
Executive	Overall business performance
Sales	Sales and revenue analysis
Production	Manufacturing performance
Inventory	Stock and inventory monitoring
Finance	Financial reporting
Customer	Customer analytics
Supplier	Supplier performance

Using Slicers

Every dashboard contains interactive slicers.

Typical slicers include:

- Year
- Region
- Product Category
- Customer
- Supplier
- Machine
- Movement Type

To filter data:

1. Click a slicer value.
2. All linked KPIs and charts update automatically.
3. Hold **Ctrl** to select multiple values.
4. Use the **Clear Filter** button to remove filters.

Understanding KPI Cards

Each dashboard contains KPI cards summarizing important business metrics.

Examples include:

KPI	Meaning
Total Revenue	Total sales generated
Gross Profit	Revenue minus cost
Profit Margin	Profit percentage
Inventory Value	Value of inventory on hand
Total Expenses	Business operating expenses
Collection Rate	Percentage of invoices collected
Total Production	Units manufactured
Purchase Value	Procurement expenditure

All KPI cards respond dynamically to slicer selections.

Understanding Charts

Charts provide visual summaries of business performance.

Common chart types include:

- Line Charts – Trends over time
- Clustered Column Charts – Category comparison
- Horizontal Bar Charts – Ranked comparisons
- Donut Charts – Contribution analysis
- Combo Charts – Comparison of two related metrics

Hover over a chart element to view detailed values.

Refreshing Data

To refresh the workbook after updating the source data:

1. Open the workbook.
 2. Select the **Data** tab.
 3. Click **Refresh All**.
 4. Wait for all queries to finish.
 5. Review the **Refresh Status** sheet to confirm completion.
-

Dashboard Descriptions

Executive Dashboard

Provides an overall view of business performance using enterprise-level KPIs.

Sales Dashboard

Tracks revenue, sales trends, customer performance, and product performance.

Production Dashboard

Monitors production efficiency, waste, machine utilization, and production costs.

Inventory Dashboard

Analyzes stock levels, inventory movements, inventory valuation, and supplier inventory.

Finance Dashboard

Tracks revenue, expenses, customer payments, outstanding balances, and collection performance.

Customer Dashboard

Analyzes customer revenue, payment behavior, outstanding balances, and customer segmentation.

Supplier Dashboard

Evaluates supplier performance, procurement spending, purchase trends, and supplier contribution.

Troubleshooting

Issue	Solution
KPI not updating	Check slicer connections
Chart not updating	Refresh PivotTable
Missing data	Click Data → Refresh All
Broken PivotChart	Verify PivotTable source
Incorrect month order	Sort using Month Number
Slicer not affecting chart	Check Report Connections

Best Practices

- Refresh the workbook before analysis.
- Apply filters before interpreting KPIs.
- Review the Executive Dashboard first for an overall business summary.
- Use the navigation buttons to move between dashboards.
- Avoid editing PivotTables or DAX measures unless maintaining the solution.

System Requirements

- Microsoft Excel 365 (recommended)
- Power Query enabled
- Power Pivot enabled
- Macros not required
